

INSTITUTE OF GLOBAL DESIGN ARCHITECTS

The Institute of Global Design Architects is the firm of elite architects and engineers responsible for the design and creation of the Enclosure systems worldwide. Their plans and designs assisted in rescuing humanity from the environmental hostility of Terra, and brought increased order and efficiency to the human system. Though the construction of the Enclosures is complete, the Institute is still responsible for maintenance and upgrades to the existing systems. Only the scholastically superior are given the opportunity to be admitted into the Institute.

SIGNIFICANT HISTORY

The Enclosure Act of 2026 removed humanity from the harsh atmosphere and climate of Terra, and offered a new home to mankind in the Enclosures. While this was the logical next step in human evolution, the Act met with some resistance. The wildergoers tried to remain outside the Enclosure cities against the warning of the Health Patrollers. As the new Enclosures were being built and populated, the old cities of Terra were dismantled and used for material to build some of the new cities. Gregory Passio and Zuni Franklin, two of the world's leading thinkers and architects, were placed in charge of the execution of the Enclosure Act. Leading

the Institute of Global Design Architects, they liberated mankind from Terra with their expertise in design and engineering.

ZUNI FRANKLIN

Commonly referred to as the Mother of the Enclosure, Zuni Franklin was the visionary behind the Enclosure cities. Zuni's designs and blueprints were used in the creation of the Enclosure. As one of the heads of the Institute of Global Designs, she was given the task of carrying out the Enclosure Act along with Gregory Passio. She retired from her position in the Institute in 2051.

GREGORY PASSIO

The Father of the Enclosure, Passio was able to take the visions and creations of Franklin, and apply his technical knowledge to the construction of the Enclosure. As one of the authors of the Enclosure Act, he was the driving force behind its ratification and execution. Passio suffered a fatal accident in overseeing the construction of Alaska City, never being able to see his creation complete.

PHILOSOPHY

The Enclosures are the result of the continuing evolution of the human species. As Terra grows more inhospitable, the construction of the Enclosure is the human's way of adapting to the climate changes, pollution, diseases, and human atrocities. The Enclosures facilitate this by controlling all the variables of health, climate, population, and order in society. The Enclosure provides humanity with nourishment, shelter, entertainment, and opportunity in a safe environment.
